

# Features & Accessories

## The World's Highest Quality Church Seating

### Strongest Frames

Always high tensile strength quality 1010 carbon steel. Our sanctuary chairs use TRUE 1 inch 16 gauge steel (not the weaker 18 gauge) with true mandrel bends with full 1 inch welds and 9/32 inch crossbars for foundations that will support over 1700 lbs and last a Lifetime.

### Ganger Choices

We offer both Standard and Radius quick release interlocking chair systems that will satisfy building and/or fire code requirements. Easy, convenient and safe to use.

### Durable Foundations

Our seat and back foundations are industrial quality 1/2" true plywood (never imitation plywood such as OSB, Strandboard or Multi-Ply™) or Space age PolymerTough™ lightweight for superior strength and holding power.

### Stafast™ Fastening Systems

ChurchPlaza introduced "T"-Nut construction to the church seating market! We exclusively use Stafast™ steel-to-steel non-slip T-Nuts to hold our real plywood and PolymerTough™ seat and back foundations to the world's strongest church chair frames. Provides 5X the holding power of competitors wood screws and more holding power than competitor's BOS™ steel-to-plastic fastening system.

### Quality Fabrics

ChurchPlaza fabrics are among the highest quality commercial fabrics available and certified for wearability, color fastness and durability with MoistureBarrier™ protection added at no additional cost.

### Upgraded Floor Glides

We use only the highest quality booted glides and offer 3 options to include a multi-surface rocker glide, heavy duty snag-free metal carpet glide and a long wearing multi-surface self-leveling glide. All our glides are "booted" for added protection for your chairs.

**Underseat Bookracks**

Durable factory installed and painted in the frame color of the chair. Holds books up to 2 1/2 inches thick and includes communion cup holder.

**Card Pockets**

Will hold visitor registration cards, offering envelopes or special notes. Choose either single pocket 6 inch wide or full width. Both are 4 inches deep.

**Removeable Bookracks**

May be added to chairs after chairs manufactured. Must be removed prior to stacking chairs. Available in all 26 frame colors.

**Book Pouches**

Sewn into the back of the chairs like an airline seat. The elastic band holds the pouch securely to the back of the chair. These pouches will hold one hymnal or small Bible. Not designed to hold purses, etc.

**Stack Buttons**

Multiple stack buttons have positive tight fit to stay in place and protect the legs from marring during stacking. Clear buttons blend in and are less noticeable.

**Dual Layer Foam**

ChurchPlaza introduced the first dual layer foam chairs to the Worship Market in 1989 and we have continued to perfect the additional comfort of combining a firmer Virgin underfoam with a softer Virgin top foam.
