

# CHURCHPLAZA CHAIRS ARE BUILT TO LAST!

## The Frame is the Strength of the Design

Once you have the opportunity to try one of our ChurchPlaza chairs, you'll know why these chairs are built to last. When you first sit down, you'll immediately feel frames that were designed to support you forever. As you examine the construction of the frame and see the quality of the workmanship, you'll understand why we extend a LIFETIME frame warranty. We're confident these chairs will outlast any other chairs available to your church!

## Heavy Duty Steel

ChurchPlaza frames are designed to be trouble free and are produced to exacting standards. We start with QUALITY STEEL that is precision welded, heavy duty, 1 inch, 16 gauge square tubing in the base and ¾" in the back supports. Using high tensile strength 1010 carbon steel made to the industry's highest standards insures the frame will support over 1700 pounds. The 16 gauge tubing exceeds the strength of the standard 18 gauge tubing used by most other manufacturers (The smaller the gauge numbers the thicker the tubing walls). The walls of our 16 gauge tubing are over 30% thicker and about twice as strong as the popular 18 gauge frame tubing.

## TRUE Mandrel Tube Bending

The ChurchPlaza Standard is to build the strongest chairs possible! We use mandrel bending for the steel used in our chair frames. In that way, the excess material from the bend is channeled to the inside of the curve to provide a smooth, even, and strong bend. There is no crushing to compromise the integrity of the steel, thus insuring your church of a quality chair that will support you for a lifetime.

## Quality in design

Mandrel bending is only part of the story. The design of the frame is what is really noteworthy. We actually use five frame designs for ChurchPlaza Sanctuary Seating chairs (not like others who save money by using one frame design for all applications) with each designed for a specific application. All Sanctuary Seating frames have tubular cross bracing between the legs and not simply welded rods. This provides the ultimate support and strength and contributes to the design of the frame to exceed BIFMA standards.

## Bumper-to-Bumper lifetime Warranty

The industry's most comprehensive and trustworthy seating warranty from those who have earned the endorsements and recommendations of 45 national denominations, fellowships, ministries, and/or their publishing houses. Be sure to read the fine print and compare with other chair providers.

## Frame and Fabric Standards

ChurchPlaza chairs are built to exceed the rigorous standards set by the Business and Furniture Manufacturers Association (BIFMA). Our fabrics are subject to the Wyzenbeek Abrasion Resistance test assuring the ability of the fabric to withstand years of use without showing signs of wear. You can feel confident that your chairs are going to continue to look good, even after rigorous use in the church.

## Frame Finish

Scratch Resistance is the benefit of our 5-Step Electrostatic painting process, known as "Powder Coating". The paint used in ChurchPlaza chairs actually bonds to the metal for a superior and durable finish. This is the same process used in automotive painting. It resists scratching, chipping and peeling so your chairs will retain their "like new" look over many years of hard usage.

## "Comfortplus" Construction

You'll enjoy sitting in the pure luxurious comfort of a ChurchPlaza Sanctuary Seat knowing the quality is unsurpassed. Our quality virgin foam is DUAL DENSITY and is standard on all of our chairs. There is no additional charge for this feature and unlike other church and sanctuary seating manufacturers, CHURCHPLAZA NEVER CHARGES A FOAM UPCHARGE. That's what "comfortplus" construction is ..... Comfort PLUS quality and durability you can expect and trust to be built into every ChurchPlaza chair without additional fees.
